

KLARI-CORD 4

Features

- 1- to 6-channel measuring module with 3 galvanically isolated ASICs and 1 shared microcontroller.
- 2 Lemo-sockets for various PROBES (current, voltage, temperature).
- 1 MS3-socket for measuring 3 voltages and 1 temperature.
- the measurement results can be displayed on the module screen.
- the measurement results can also transmitted "online" via 2 CANs.
- adjustable switchovers between slow and fast measure mode.
- 2 USB-interfaces, USB 1 enables the configuration of the measuring module, USB 2 is used to transfer the stored data from the integrated SD card.
- perfect adaption to the measuring task, using pluggable measuring adapters ("PROBES"). A huge number of available PROBES enable also the measurement of quiescent- and operating currents, e.g. 200 $\mu\Omega$ -PROBE, measuring range of 1,25 mA...+3.600/-1.500 A.
- as a result of the low power consumption (approx. 40...80 mA, depending on the configuration) the module is applicable for long-term recordings. To limit the data volume, various procedures are configurable via software.
- **Individual configuration of the measurement channels:**
 - via CAN1-interface with max. 8.000 frames/second, 125 μ s/measuring value
 - to the integrated SD card with max. 200 frames/second, 5 ms/ measuring value
 - to the configurable display
- **PROBE variants:**
 - current-, voltage- or temperature - PROBE (PT-1000)
 - MS3-plug with U_batt, U_aux, U_3 and temperature-PROBE (PT1000)

Version

- Bopla housing approx. 135/110/35 mm (l/w/h)
- **measuring module also without display available**
- protection class IP65
- temperature range -20...+70°C with display
- temperature range -40...+85°C without display
- supply 6..50 V DC, current consumption approx. 40...80 mA (at 12 V supply)
standard: Sub-D, 15-pin plug. Alternatively via MS3-plug (U_batt/U_aux)

A detailed technical description is contained in our user manual

Delivery

- measuring module with MS3-plug (please order PROBES separately)
- PC software for configuration via CAN or USB-2.0 interface
- CAN database and documentation on CD ROM
- USB 2.0 connection cable

Accessories

- cable harness IP65 with supply and CAN

KLARI-CORD 4

TECHNICAL DATA

Input	<ul style="list-style-type: none"> • 1...5 measuring channels with 3 ASICs • 2 x Lemo-socket for various PROBES (voltage, current or temperature) • 1 x MS3-socket for U_batt, U_aux, U_3 and temperature (PT1000) 																		
Resolution	<ul style="list-style-type: none"> • 5 measuring ranges with selectable autorange-function for PROBE-connections • ± 15 bit/measuring range <table border="1"> <thead> <tr> <th>Gain</th> <th>Range Lemo</th> <th>Resolution</th> </tr> </thead> <tbody> <tr> <td>100</td> <td>+/- 7,5 mV</td> <td>0,250 μV/bit</td> </tr> <tr> <td>50</td> <td>+/- 15 mV</td> <td>0,500 μV/bit</td> </tr> <tr> <td>24</td> <td>+/- 30 mV</td> <td>1 μV/bit</td> </tr> <tr> <td>6</td> <td>+/- 120 mV</td> <td>4 μV/bit</td> </tr> <tr> <td>1</td> <td>+ 720 / - 300 mV</td> <td>24 μV/bit</td> </tr> </tbody> </table>	Gain	Range Lemo	Resolution	100	+/- 7,5 mV	0,250 μ V/bit	50	+/- 15 mV	0,500 μ V/bit	24	+/- 30 mV	1 μ V/bit	6	+/- 120 mV	4 μ V/bit	1	+ 720 / - 300 mV	24 μ V/bit
Gain	Range Lemo	Resolution

Block diagram

Module power supplied via MS3-plug:

The module has 2 switches inside, that allow the user to supply the module with power either via the 15-pin Sub D-plug or via the MS3-plug (U_batt and U_aux).

KLARI-CORD 4

Principle of measurement

• Measurement options using MS3-plug: MS 3

- Measuring 1 parameter

- Measuring 2 parameters

- Measuring 3 parameters

- Measuring 4 parameters

• Measurement options using 2 x Lemo and MS3 plug:

Status May 2016. All mentioned trademarks or brands are property of the corresponding owner. Subject to error and technical changes. V4

Application

Power supply of the module via MS3-plug: red (+) and black (-) leads have to be connected.
Or via **Sub-D plug 15-pin** with cable harness.

Measurement of voltages U_{batt} and U_{aux} using 1 battery:
0 V-reference, blue lead has to be connected to minus pole of battery.
 U_{batt} = + signal_1, red lead to plus pole of battery.
 U_{aux} = + signal_2, black lead at a different measuring point.

- **Module power supplied via Sub D-15 pin**
Measurement of currents and voltages using 1 battery:
- drive mode, motor is running, generator feeds battery and electrical consumers

- **Module power supplied via MS3-plug**
Measurement of currents and voltages using 2 batteries: starting process
